

9/20/2005

**Coordinated flight #1**

C206 took off 9:04 CDT

Sky is blue with some remaining Cirrus. MPL shows aerosol up to 3 km.

J-31 took off 10:30 CDT , landed 12:17 CDT. Cirrus was a big factor.

Got some good profiles and legs. Aerosol spatially very variable.

**Coordinated flight #2**

C206 took off ? CDT

J-31 taking off 15:43 CDT. Lower legs flown in close coordination with

C206. J-31 landed ~17:50 CDT. No cirrus interference. Perfect flights

with lots of vertical profiles and legs.
